RESEARCH and EDUCATION

Course Objectives:

At the conclusion of this course, the participant should be able to:

- Discuss strategies for successful fracture treatment by integrating ideas from current medical evidence and from demonstration and discussion with faculty experts. Be able explain lessons learned to peers at home institutions.
- Compare one's own decision-making and surgical techniques to current standards.
- Identify areas for change of practice after analysis of current practice as compared to course content.
- Identify resources needed to provide up to date care, including complex surgical procedures, in order to provide high quality, safe and effective care.
- Identify implants appropriate for trauma care management. Recognize instruments and implants needed to support best practice orthopaedic management.
- Practice utilization of implants to support orthopaedic surgical procedures.
- Participants will bridge potential knowledge gaps about orthopaedic trauma research efforts and be able to organize and design quality research projects to address clinical concerns to improve outcomes.
- Self- Assessment Examination (SAE) will provide participants an awareness of individual knowledge gaps which can be addressed post conference through individual self- study programs.
